'Ολύμπια Δώματα'

OR, AN ALMANACK

For the YEAR of our

LORD GOD 1724

Being the Bissextile, or Leap-Year.

And from the Worlds Creation, 5673.

Wherein is contained the Lunations, Conjunctions, Aspects and Effects of the Planets; the Increase, Decrease, and Length of the Days and Nights; with the Rising, Southing and Setting of the Planets and Fixed Stars throughout the Year, whereby may be known the exact Hour of the Night at all times, when either the Moon or Stars are seen; and an Equation Table, for the rectifying Pendulum Clocks and Watches.

Calculated according to Art, and referred to the Horizon of the antient and renowned Borough-Town of *Stamford*, (formerly a famous University) whose Longitude is 24 deg. 20 min. and Latitude 52 deg. 41 min. fitting all the middle Counties of *ENGLAND*, and without sensible Error the whole Kingdom.

Non est è Terris mollis ad Astra Via.

By JOHN WING, Philomath.

IMPRIMATUR, S. L. *July* 5. 1723.

LONDON:
Printed by J. Dawks, for the Company of STATIONERS, 1724.

Common Notes for this present Year.

Julian, English or old account.		*Gregorian* or new account.

This Table shews the Interest of any sum of Money from 1 *s.* to 100 *l.* from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for greater exactness the peny is divided into a 100 parts; so that 25 is a farthing, and 50 parts an half-peny, and 75 parts 3 far-things, &c.

Example.

The Interest of 100 *l.* for six months one Week and one day, is thus found by the Table.

		l.	*s.*	*d.*	*q.*		
Interest of 100 *l.*	for 6 mon.	03	0	0	00	*l.*	*s.* *d.*
	for 1 week,	00	2	3	61	viz.	3-2-7 half-peny
	for 1 day,	00	0	3	96		
		03	2	7	57		

A Regal Table in a more exact manner.

The Year, Month, and Day, (accounting the Year to begin *Jan.* 1.) whereon every King and Queen of *Eng.* since the Conquest began their reign.			The number of Years, Months, and Days, that every K. and Q. reigned 28 da. to a month.						The num. of Y. expired in this Y. since they began to reign; as also since they ended.

K. George	1714	August 1. Whom God grant long to Reign.								

Here Gods Vicegerents do in order ſtand,
And how Succeſſively each Rul'd the Land:
May we not want a Monarch great indeed,
Wiſe, Good and Gracious, Merciful in Need:
For ſuch a one may all good Chriſtians ſtand,
Both now and always for to Rule this Land.

A Table shewing the Bearing, Distance, Longest, Day, and difference of Meridians of most of the principal Cities in the World, from the famous City of LONDON.

WING. 1723.

*** Note: That q stands for Quadrans a quarter of a part; ſ for semiſs half; and d for Dodrans three quarters of a Part.

To find the true Hour of the Day by the former Table.

TAke a Staff of what length you pleaſe, and with a pair of Compaſſes divide it into ten equal Parts, marking them upon the Staff; then in ſome level Place where the Sun doth ſhine, ſet it upright, and mark where the end of the ſhadow falls; which done, meaſure with your Staff the length of the ſhadow, and note the Parts it contains; which find out in this Table right againſt the Day of the Month, and over head you will find the true Hour of the Day; as will appear more clearly by Example.

Suppoſe the 9th of *April*, or 13th of *Auguſt*, I ſhould find the ſhadow of the Staff to be 30 Parts and a quarter of a Part more, that is, three Staffs length, and a quarter of a Part, therefore ſeeking in the Table, againſt the ſaid Days, I find 30 *q* which is 30 Parts and a quarter; and ſee over head that it is then either 7 a Clock in the Morning, or 5 in the Afternoon; ſo that if your Obſervation was in the Morning, it was 7; but if in the Afternoon, 5 a Clock.

Thus the 13th of *February*, or 8th of *October*, if the ſhadow of the Staff be juſt 19 Parts, it is 12 a Clock, if 20 it's one a Clock, if 24, two a Clock, if the Obſervation be made in the Afternoon.

Thus you ſee the Hour of the Day is exactly and ſpeedily found, by a Rod or Staff, and the help of this Table; likewiſe by the *Kalendar* Part may the Hour of the Night be known either by the Moon, Planets, or Fixed Stars, being of Excellent Uſe to all ſorts of Men,

*** Note: That *q* ſtands for *Quadrans* a quarter of a part; and *s* for *Semiſis* half; and *d* for *Dodrans* three quarters of a Part.

The Spring *appears, which cheers the Hearts of all;*
Men, Birds, and Beaſts, on their Creator call.
This is the Time oth' Year, the glorious Sun,
Peeps through the Horns of the Celeſtial Ram.
Nature doth ev'ry Way her Work prepare
The Seeds of all Things lodg'd in Earth and Air;
As with a Loadſtone all is touch'd above,
And thus by th' Heavenly Pow'rs all do move.
The glorious Sun *with his refreſhing Rays,*
Fills the whole World with comfortable Days.
Th' Almighty God in his moſt juſt Decrees.
Appoints all Things on Earth as he foreſees.
And all depends (of Hope) Hate, Fear, or Love,
By Heavens Order on thoſe Powers above.
Our ſcatter'd Fate, by an eternal Law,
Are Lots of Chance which we are forc'd to draw:
But there's an unſeen Hand, Fate's Eldeſt Brother,
That leads one Sort of Men, and draws the other.

Of the Spring *Quarter.*

THE *Spring* Quarter, the moſt pleaſant, and [c]
lightful Part of the Year, begins with the *S*
Entrance into the firſt Scruple of the *Equinoctial Si*
Aries; which happens this Year on *Monday* the 9*th* D
of *March* (in the *Meridian* of *London*) at 40 min. 11 S
paſt 9 in the Morning, but in the *Meridian* of *St*
fr

rd, 2 Minutes ſooner; to which Time this *Scheme* is when Days and Nights, are equal throughout the World, except under the Poles; where there is but one Day, and one Night in the Year: At which Time, the *Sun* hath no Declination nor Amplitude of Riſing and Setting from the true Eaſt or Weſt Points, but riſes exactly due Eaſt, and ſets due Weſt; his Meridian Altitude, being equal to the Complement of the Latitude; but to return to the Figure of the Heavens aforeſaid, where 28 deg. 15 min. of *Gemini* riſes in the Eaſt Angle, and 22 deg. 34 min. of *Aquary*, is upon the Midheaven. Here are a many Aſpects and Configurations at the Time of this Ingreſs, the *Moon* coming from a Conjunction of *Saturn*, and applys to a Square of *Venus*, and a Conjunction of *Jupiter*. *Saturn*

is in Trine to *Venus*, and *Sextile* to *Mercury*, and
Oppoſition to *Mars* in the Aſcendant, and in Square
the *Sun*. *Jupiter* is upon the Cuſp of the 9th Hou
in Square to *Venus*, and *Sextile* to the *Sun*, which a
the moſt remarkable at the Time of this Ingreſs, a
by theſe glorious Bodies is preſignified many Chang
and Alterations in Mundane Matters; which ſeems
be of ill Conſequence to ſome neighbouring Countri
and at tue ſame Time gives Umbrage to others;
may expect to hear of Differences and Diſturbauces
bout Ancient Rites, Privileges, Laws, Cuſtoms, &
as *Saturn*'s Poſition in the 7th Houſe readily compl
with, and *Jupiter* being upon the Cuſp of the 9
Houſe trumps up new Principles in Eccleſiaſtical Affai
great Pretence to Reformation, tho' little appears
that Purpoſe, *Amor literarum quotidie creſcit*. *Jupi*
in *Sextile* to the *Sun* and Square to *Venus*; ſignifi
Advancement to Perſons in Eccleſiaſtical Honours, Di
nities, and Preferments; it alſo portends Proſperity
Merchants and Traders on the Seas. Many oth
Things might have been ſaid touching this Part of t
Year, which I ſhall leave to the expert *Aſtrologer*
Deſcant upon.

Thus have we ſeen the pleaſant Spring *paſs ov'r,*
Which hath diſcover'd Things not known before.
See how theſe wretched Times degenerate
Men by which Means become unfortunate.
Statutes, *and* Politicks *do make relation,*
What 'tis of late that ſo Buffoon'd the Nation.

Qui Deo ſe dicat, optinie facit.

Of the Summer *Quarter.*

THE *Summer* Quarter is always said to begin when this our Earthly Globe inclining Southward 23 deg. 9 min. towards the *Sun*, will Volve and remove us, her Nothren Inhabitants to the greateſt Portion of Day; or when the *Sun* (according to Appearance) enters the firſt Scruple of *Cancer*, which either Way taken, falleth this Year on *Wedneſday* the 10th of *June*, 45 Minutes paſt 9 in the Morning, at which Inſtant 6 Degrees of *Virgo* aſcends, and 29 Degrees of *Taurus* culminates, *Jupiter* is in 11 Degrees 25 min. of *Aquary*, in Oppoſition to *Mars* and *Venus*, which are in Conjunction in the 12th Houſe, the *Moon* is in 3 Deg. 8 min. of *Cancer*, in the 10 Houſe, ſeperating from a Conjunction of the *Sun*, and applying to an Oppoſition of *Saturn*, and Conjunction of *Mercury*. This is no friendly Poſition, but diſturbances ariſes in ſeveral Parts of the World, and ſome raging Diſtemper is Threatned, from which *Libera Nos Domine*. We may alſo expect to hear of Thefts, Robberies, Murders, and ſuch like inhumane Barbarities.

The Starry Motions mutually convey,
But Acts at this Time in no peaceful Way;
Sweet Influences that would do us right,
But Mars *and* Martialiſts *exert their Spite;*
Thrice happy we, that may ſecurely ſtand,
T' enjoy the Bleſſings of a peaceful Land.

Iracundia multorum malorum cauſa.

Of the Autumn *Quarter.*

THE *Autumn* or *Harveſt* Quarter, begins at ſuch Time as the Sun touches the firſt Scruple of the Equinoctial Sign *Libra*, or more really when the Earth enters

enters *Aries*, hath volved her ſelf at Right Angles t
the *Sun*, and receiveth a like Portion of Light an
Darkneſs; which either Way taken, happens this Ye
on *Friday* the 11th Day of *September*, 8 min. paſt 11
Night at which Time 17 deg. of *Cancer* Aſcends, a
16 deg. of *Piſces* is upon the Medium, *Celi*, *Saturn*
5 deg. 51 min. of *Capricorn* and in Square to the *Su*
Jupiter is in 2 degrees 25 minutes of *Aquary* in Tri
to the *Sun*, and *Sextile* to the *Moon*. *Mars* is in 2
deg. 45 min. of *Libra*, in *Sextile* to *Venus* and Conjunct
on of *Mercury*. *Venus* is in 25 deg. 31 min. of *Li*
and in *Sextile* to *Mercury* in 25 deg. of *Libra*. T
Moon is in the fifth Houſe in 00 deg. 45 min. of *S*
gitary in *Sextile* to the *Sun* and *Jupiter*, which are pr
miſing Arguments of Proſperity to the Common Pe
ple; and excepting the Square of the *Sun* and *S*
turn, which ſeems to promote ſome Diſturbances of
ſhort Continuance in thoſe Parts of the World, ſubj
to *Libra* and *Capricorn*, all the reſt of the Aſpects a
of a friendly Nature, and promotes Peace and a hap
Concurrence to great Part of *Europe*.

Now doth the Smiling Heavens their Influence,
Exert their Force and friendly Rays diſpence
Upon the Husbandman *for all his Pains,*
Of which ſome Forraign Countries complains.
By Peace and Plenty, Starry Powers appear,
As God ſhall Order each Revolving Year.

Nihil ſine numine fœlix.

Of the Winter *Quarter.*

THE *Winter* Quarter makes its Entrance w
our Earthly Globe by its Circumrotation hath vo
ed it ſelf to the greateſt Inclination; whereby we be
fartheſt deflected from the *Sun*'s Rays, receive le
Light, and cauſes our ſhorteſt Day and longeſt Nig

according to appearance, when the *Sun* enters *Capricorn*; which either Way taken, falls this Year on *Thurſday* the 10th Day of *December*, at 1 Hour 39 minutes 5 ſeconds in the Afternoon; at which Time, 22 deg. of *Taurus* is aſcending, and 23 degrees of *Capricorn* is upon the Mid-Heaven. *Saturn* is in 12 deg. 25 min. of *Capricorn* and in Conjunction with *Mercury*. *Jupiter* is in 12 deg. 28 min. of *Aquary*, and is in Square to *Venus*. *Mars* is in 25 degrees 35 min. of *Sagitary*, and nearly in Conjunction with the *Sun*. *Venus* is in 18 deg. 5 min. of *Scorpio*. *Mercury* is in 2 degrees 30 min. of *Capricorn*; and in *Sextile* to the *Moon*, and the *Moon* 7. deg. 25 min. of ♓; applying to the Trine of *Venus*. Theſe are friendly Poſitions, and are likely to produce many great and eminent Effects, which the beginning of the next *Spring* will thoroughly inform us of.

Now Winter *like* Old Age *comes jogging on,*
The Blooming Beauty of the Year is gone.
Thus when to ſixty Years we once are buri'd,
Farewel all Eaſe and Comforts from the World.
Conſider what we had, which now we want;
Vigour and Heat is now grown very ſcant.

Omnes morti obnoxii.

Of the Eclipſes *this Year.*

THIS Year produceth Four *Eclipſes*, viz. Two of the *Sun*, and Two of the *Moon*.

The Firſt is a Non-viſible *Eclipſe* of the *Moon* on Monday the 27th Day of *April* at 8 of the Clock in the Morning; but will not be ſeen in any Part of *England* by reaſon the *Moon* Sets before the *Eclipſe* be-

The

The Second will be a great *Eclipse* of the *Sun*, and nearly total on *Monday* the 11th Day of *May* in the Afternoon, according to the following Calculation drawn from the Tables in my *Scientia Stellarum*.
